

“We are truly delighted with this PowTechnology solution. It has delivered the perfect balance between cost and performance, provided reliable data and alerts, improved depot safety and generated great efficiencies in our stock control and logistics functions. We’re also really impressed by the level of technical and commercial support we have received at every point in this project!”

JAMES TURNER
Craggs Energy Technical Manager

The task

Craggs Energy supplies over 50 million litres per annum of fuels and lubricants to UK homes, farms and businesses via three depots and a national partner network. Taking manual readings was awkward and hazardous on four 230,000 litre tanks at their Padiham Depot.

The result

With the telemetry solution installed, regular data and low-level alerts are reported to multiple users, including colleagues based 25 miles away, ensuring that these huge tanks are stocked up and ready to fill the fleet for daily deliveries.

The solution

PowTechnology Metron telemetry hardware now measures level on all four tanks, automatically sending data and low level alerts via our MetronView cloud. Post installation, transmit intervals were remotely increased via MetronView to report levels hourly.

Summary

- | No run-outs
- | Improved site safety
- | Efficient stock control
- | Efficient logistics
- | Improved customer service
