

“We have used Powelectrics Metron kit for several years now. It has been reliable and robust from the outset. Installation is intuitive and there is great tech support. Telemetry allows us to offer exceptional service to our customers and has helped us develop long-term partnerships.”

KARL ROYCE
Senior Quantity Surveyor at CG Godfrey

The task

CG Godfrey Ltd are an engineering contractor, specialising in vacuum sewerage systems and deep drainage. They were keen to offer their strong customer base of District Councils, utility companies and private landowners the benefits of connected-sensor technology.

The result

Members of the CG Godfrey team receive alarms and decide on appropriate action, ensuring that timely maintenance visits are made when necessary and that customers receive the highest standards of service.

The solution

Powelectrics IIoT kit has been rolled out to customers with multiple pumping stations including South Holland & Fenland District Councils, generating alarms for high level, mains power failure & pump failure, so prompt action can be taken.

Summary

- | Maintenance costs minimised
- | Excellent customer service
- | Downtime minimised
- | Environmental safety
- | Customers tied in
